Get Back To Your Active Life

HIP REPLACEMENT SURGERY

With ORTHOPILOT
A Pathbreaking Procedure Using Advanced Computer Navigation Technology

PATIENT GUIDE

“I feel and move more like myself again; I only wish I had done this surgery much earlier”

– Patient who underwent Hip Replacement Surgery

Dr. Santosh Kumar
MBBS, D.Ortho, M.Ch.[ Ortho ], Joint Replacement Specialist

POORVA ORTHOPAEDIC FOUNDATION
About Dr. Santosh Kumar

MBBS (JIPMER), D.ORTH (JIPMER), MCh ORTH (SCYCHELLS)
Head : Department of Computer Assisted Joint Replacement Surgery : BELLE VUE CLINIC
JOINT REPLACEMENT SURGEON, ARTHRITIS FOUNDATION, INDIA
Subspecialty- Knee Joint- Total Knee Replacement, Knee Arthroscopy.
Fellowship in Joint Replacement, Max Hospital, New Delhi
TRAINED IN COMPUTER ASSISTED JOINT REPLACEMENT FROM AUSTRIA
Trained in Revision Knee and Hip Replacements
Trained in Complex Joint Replacement from the DELTA FOUNDATION of AUSTRALIA

INTRODUCTION
Dr Santosh Kumar and his team are leading knee specialists in Kolkata. He is one of the best doctors in Knee replacement today. Knee replacements are routine in Kolkata (Calcutta) today and Dr Santosh Kumar has been instrumental in making international quality knee surgery affordable to the mass.

HE HAS EXPERIENCE OF MORE THAN TWO THOUSAND KNEE REPLACEMENTS

GRADUATION
MBBS – from Jawaharlal Institute of Post Graduate Medical Education and Research (JIPMER, Pondichery) Directorate General of health Services, Govt. of India from 1995 to 2001.

POST GRADUATION
D Orth from Jawaharlal Institute of Post Graduate Medical Education and Research (JIPMER, Pondichery) Directorate General of health Services, Govt of India from 1st April to 31st March 2005.

BONE BANK JIPMER
Clinical Research Fellow in Orthopaedic Oncology at JIPMER Hospital from April 2005 to June 2005.

REDISTRAR ORTHOPEDICS
Whole time registrar in Orthopaedics at Bhattacharya’s Orthopaedics and Related Research Center (P) Ltd., Narayanpur, Kolkata – 136 from 1st July 2005 to 31st June 2007.

MCh ORTH
Passed MCh ORTH from the University of Seychelles American Institute of Medicine, March 13th 2008.
MCh Thesis : a study into the controversial aspects of interlocking nail of femur.

TRAINING
DELTA COURSE for advanced aspects of complex primary and REVISION knee replacement. At MAX Hospital, New Delhi in Sept, 2008.

FELLOWSHIP in KNEE REPLACEMENT in Max Hospital, New Delhi from Sept, 2008 with Dr. S.K.S. Marya for total of 54 knee replacement surgeries.

AO TRAUMA Training 8th to 10th Oct, 2009, Kanpur

DELTA COURSE for Advanced Aspects of Complex Primary and Revision Knee Replacement, at SUN SHINE Hospital, Hyderabad in Nov, 2009.

Ranawat joint replacement course in Jan 2010 Kolkata

Train in complex joint replacements, at Bangkok. Jan 2011 by DEPUY institute at Bangkok

Train in revision joint replacements by DE PUY institute at Chennai, June 2011.

Medtronics Academy course in cervical spine in October 2011.

Train in computer assisted knee replacement at Fortis Chandigarh in Jan 2012

AO advanced trauma course in March 2012 at Kolkata

PAPERS PUBLISHED / PRESENTED
The role of total hip replacement in ankylosing spondylitis patients – under consideration for publication in the Indian journal of orthopaedics.
Follow up of 24 total hip replacements in ankylosing spondylitis patients presented at the annual conference of the West Bengal Orthopaedics Association 2006.

AWARDS RECEIVED:
Dr. Santosh Kumar received Certificate of International Excellence in Minimally Invasive Computer Assisted Joint Replacement Surgery by the ASCULAP ACADEMY, Germany.

TRAINING (continued)

Trained in complex joint replacements in USA , PHOENIX, by KLEOS foundation (Smith and Nephew educational body) April 2012

Trained in minimally invasive spine surgery by Medtronics Academy foundation May 2012

Trained in computer assisted navigation technology for knee replacement in Vienna Austria, in June 2012.

SECTION A
Hip Pain

Arthritis is the leading cause of disability in India, and the most frequent cause of discomfort and chronic hip pain. In fact, it’s estimated that 1 in 5 people in India has some form of arthritis. Two-thirds of the people who have been diagnosed with arthritis are under the age of 65.

Of the more than 100 types of arthritis, the following three are the most common causes of joint damage:
1. Osteoarthritis
2. Rheumatoid Arthritis
3. Trauma Related Arthritis
Arthritis

Osteoarthritis is a disease which involves the wearing away of the normal smooth joint surfaces. This results in bone-on-bone contact, producing pain and stiffness.

Rheumatoid arthritis is a systemic disease because it may attack any or all joints in the body. It affects women more often than men and can strike young and old alike. Unlike osteoarthritis, rheumatoid arthritis causes destruction of the joint through severe inflammation. The body’s immune system attacks and destroys the synovial lining covering the joint capsule, the protective cartilage and the joint surface. This causes pain, swelling, joint damage and loss of mobility.

Trauma-related arthritis results from damage to the joint from a previous injury. It also results in joint damage, pain and loss of mobility.
The hip is one of your body's largest weight-bearing joints. It consists of two main parts: a ball (femoral head) that fits into a rounded socket (acetabulum) in your pelvis. Ligaments connect the ball to the socket and provide stability to the joint. The bone surfaces of your ball and socket have a smooth durable cover of articular cartilage that cushions the ends of the bones and enables them to move easily.

All remaining surfaces of the hip joint are covered by a thin, smooth tissue called synovial membrane. In a healthy hip, this membrane makes a small amount of fluid that lubricates and almost eliminates friction in your hip joint. Normally, all of these parts of your hip work in harmony, allowing you to move easily and without pain.
Total Hip Replacement

When medication, physical therapy and other conservative methods of treatment no longer relieve pain, total hip replacement may be recommended. Total hip replacement helps relieve pain and allows patients to perform some activities that may have been limited due to hip pain.

More than lakhs of people worldwide annually undergo hip replacement surgery to relieve pain and stiffness and restore mobility. Total hip replacement is the replacement of the ball and socket of the hip joint with implants. There are two main components used in total hip replacement. The acetabular shell replaces the hip socket. The femoral stem replaces the worn-out top of the femur. These components may be made of any number of materials, including metal, ceramic and/or polyethylene (medical grade plastic). During surgery, the head of the femur (thigh bone) is removed and replaced with both a stem and socket, mimicking your existing anatomy.
Your hip evaluation

The orthopaedic surgeon will ask you many questions about your hip pain as well as your general health to determine if hip surgery is appropriate for you. The evaluation will include a careful review of your X-rays and other tests. This will help the surgeon understand your pain and limitations in activity and the progression of your condition.

During your physical evaluation, the range of motion of your hips and knees will be measured, and muscle strength will be evaluated. The surgeon will observe how you walk, sit, bend and move.
To prepare yourself for surgery, you may be asked to do a number of things, including lose weight and/or stop smoking (if applicable). It is essential that you tell your surgeon about any medications or supplements you are taking. Bring a list of all medications and dosages, including over-the-counter medicines. Your doctor may want you to donate your own blood ahead of time for a possible transfusion during surgery. It is normal to feel pain and discomfort after surgery. Be sure to let the nurse know if you are in pain.

The usual hospital stay for hip replacement is three to five days. To protect your hip, you will be asked not to sit up beyond a 90-degree angle. Whatever assistive devices you need will be provided. After 24 hours, you should begin to eat and drink regularly, according to your surgeon’s direction.
Statistical Overview

• First performed in 1960.
• Since then, improvements in joint replacement surgical techniques and technology have greatly increased the effectiveness of this surgery.
• Dr. Santosh Kumar does the surgery using advanced computer navigation system - Orthopilot
Subjective Assessment

• Pain localized in hip region
• Exaggerated gait pattern (limp)
• Increase in pain when weight barring
• Reduction in the degree of ROM
• As the degeneration of the joint worsen, individual may be awakened at night with pain
• Bone spurs may occur

Osteoarthritis of the right hip is visible in this x-ray
Objective Assessment

• Gait pattern – Adaptive walking pattern that reduces pressure on the affected side.

• Muscle atrophy – Muscles in affected area are not used as much due to pain, therefore, use-it-or-lose-it applies.

• Active Range Of Motion – Limited ROM, stiffness

• Passive ROM – End feels causes severe pain

• X-ray – clear degeneration of the bone

• MRI – determines underlying complications (e.g. avascular necrosis)
Osteoarthritis  Fracture

Advanced Diagnostic Facilities are available here
Operation [ Surgery ]
Removing the Femoral Head

• Once the hip joint is entered, the femoral head is dislocated from the acetabulum.

• Then the femoral head is removed by cutting through the femoral neck with a power saw.
Reaming the Acetabulum

- After the femoral head is removed, the cartilage is removed from the acetabulum using a power drill and a special reamer.

- The reamer forms the bone in a hemispherical shape to exactly fit the metal shell of the acetabular component.
Inserting the Acetabular Component

• A trial component, which is an exact duplicate of your hip prosthesis, is used to ensure that the joint will be the right size and fit for the client.

• Once the right size and shape is determined for the acetabulum, the acetabular component is inserted into place.
Preparing the Femoral Canal

- To begin replacing the femoral head, special rasps are used to shape and scrape out femur to the exact shape of the metal stem of the femoral component.

- Once again, a trial component is used to ensure the correct size and shape. The surgeon will also test the movement of the hip joint.
Attaching the Femoral Head

- The metal ball that replaces the femoral head is attached to the femoral stem.
The Completed Hip Replacement

• Client now has a new weight bearing surface to replace the affected hip.

• Before the incision is closed, an x-ray is made to ensure new prosthesis is in the correct position.
Dr. Santosh Kumar here is seen with the advanced Orthopilot System: used in Hip Replacement surgery.

Joint Prosthesis are made as per Patients’ need using this advanced system. Very few surgeons have access to this technology in India.
Treatment by Kinesiologist

Early Postoperative Exercises

• Regular exercises to restore your normal hip motion and strength and a gradual return to everyday activities.
• Exercise 20 to 30 minutes a day divided into 3 sections.
• Increase circulation to the legs and feet to prevent blood clots
• Strengthen muscles
• Improve hip movement
Exercise Prescription
Early Stage
• The patient is released few days after the surgery
• A list of Do’s and Don’ts given
• Hip may be sore and weak
• Start with light exercises

• Ergonomics:
Rearrange furniture in the house to make using crutches easier. Setup a ‘recovery centre’, a table where you put phone, remote control, radio, medication and other essential things that you need. It makes it more accessible.
- Do’s and Don’ts -

- To avoid hip dislocation:
- Use 2-3 pillows between your legs when sleeping (roll onto your ‘good side’)
- Do not cross your legs
- Use chairs with armrest
- Do not bend forward past 90 degrees
- Use a high-rise toilet seat if necessary
- Avoid pronation of the legs
- To avoid stairs, sleep in the living room
In sitting **Do Not** bend hip above 90 degree

**Do Not** cross legs when sitting

**Do Not** bend body forward to pick objects

**Do Not** rotate leg when standing. Keep leg straight
Exercise Prescription
- Later Stages -
Progress

The therapist will teach you how to dress, get out of bed without help and use a walker or crutches. You will continue to work to strengthen yourself in preparation for your return home.

It is important for you to follow your surgeon’s directions and proper positioning techniques throughout your rehabilitation. By the time you leave the hospital, you should be progressing well in regaining your mobility and stability.

When your sutures or clips have to be removed, you will be told who will remove them and where this will be done. It is not uncommon to still experience some pain. Remember that full recovery typically takes three to six months.
Home care

Just before being discharged, you will receive instructions for your at-home recovery. Once you arrive home, one of the first things you should do is call the surgeon and make an appointment for a follow-up visit. Look for any changes around your incision.

Contact your surgeon if you develop any of the following:

1. Drainage and/or foul odor from the incision.
2. Fever (temperature about 101 degrees F or 38 degrees C) for two days.
3. Increased swelling, tenderness, redness and/or pain.
Medication/ Pain control

It is normal for you to have some discomfort. You will probably receive a prescription for pain medication before you go home. If a refill is needed, please call your surgeon’s nurse at least five days before you run out of pills. Please contact your surgeon if you have increased discomfort or pain.
Since recovery is different for each person, your surgeon will inform you when you can resume activities such as returning to work and driving. You may resume sexual activity at any time as long as you keep all hip precautions in mind. It is important to be active in order to control your weight and muscle tone. It generally takes two to three months before you can resume low-impact aerobic activities such as walking, bicycling and swimming. Jogging, high-impact aerobics and certain sports should be avoided. Although your new hip is made of very durable materials, it is subject to wear and tear. The performance of hip replacements depends on age, weight, activity level and other factors. There are potential risks, and recovery takes time. People with conditions limiting rehabilitation should not have this surgery. Only an orthopaedic surgeon can tell if hip replacement is right for you.
Special instructions

It’s common for hip replacement patients to visit their surgeon at four to six weeks, three to six months and one year after surgery. Your surgeon may request to see you once a year after the first year, even if you are not having problems. Any infection must be promptly treated with proper antibiotics because infection can spread from one area to another through the bloodstream. Every effort must be made to prevent infection in your implant. Before undergoing any treatment, you should always tell all your doctors (including dentists) that you have a hip replacement.

If you are to have dental work performed, please call your surgeon prior to having this work done. Your surgeon will most likely prescribe an antibiotic for you. Antibiotics must be used before and after any medical or dental procedure—a precaution that must be taken for the rest of your life.
SECTION B
Patients’ Experiences [ All Ortho Procedures ]

Maya Ghosh, 66 years
Kolkata
“I had been suffering from knee pain for last one year. It was difficult to walk. I heard of Dr. Santosh Kumar from my friend and got my knee operated. I now can walk. My friend too is well now. Thanks to Dr. Kumar”.

Mr Das, Ulta Danga, Kolkata
Operated for Rheumatoid Arthritis of knee. Total knee replacement done in may 2012. Retired but socially very active, was crippled and home bound, till he started moving out after knee replacement. He says, “it feels as if my age has reduced by 20 years”.

Prem Lakhani, 75 years, Kolkata
“I had long knee problem. I consulted Dr. Santosh Kumar. I was operated on 7 Jan, 14, detained in hospital for 4 days and started walking within 4 days. No pain and I am walking almost normally. I am back to normal work. Thanks to Dr”

Parbati Roy, 67 years, Kolkata
“I am 67 year. I have been suffering since 2005 and was under medication. In Oct 2013, I was almost crippled. At this stage, one of my cousins suggested for Dr. Santosh Kumar. He operated my right knee and my left knee was operated in next July. Am fine now”

Sister Jaya, Belle Vue Clinic
“Working as in-charge nurse had become so painful till I saw some operated cases by Dr Kumar and their results at our hospital. I decided to go for Knee Arthroplasty replacement. Am happy that within a month I joined back my work with confidence.”

Mr Banerjee, Beliaghata, Kolkata
An retired footballer says, “knee pain and stiffness had crippled my life in sharp distinction to the joy of playing football in my early age, actually I had suffered from ACL injury which accelerated osteoarthritis. I am happy that the joy of movement has been restored”.

Arun Kumar Jana, 71 years
“I have been suffering from knee pain since 2005. I got Dr. Santosh Kumar’s contact through internet. He advised for knee replacement. Although I was scared by many, yet Dr. Kumar explained all in details and operated. He and his team had been cooperative”.

Prof. Malabika Deb
After the knee replacement, I can climb up the stairs and walk. Feeling much better…

A Patient rides a bicycle with ease after undergoing Knee Replacement by Dr.Santosh Kumar using Orthopilot, an advanced computer navigation procedure.

New surgery boon for knee patients

**21 November, 2013**

**Kolkata:** The periodic of hospitalization and recovery for knee-replacement surgery patients has come down significantly thanks to improved techniques and quality implants. Such surgery was considered to be a two-stage operation for patients at Belle Vue Clinic on Wednesday.

Earlier, a knee-replacement surgery meant at least six days of post-operational hospitalization and the patient would be able to walk only after four days. But now patients can stand up within hours of the surgery and start walking on the second day.

While doctors in the city have been performing minimally invasive knee surgery for quite some time now, minimally invasive computer-assisted total knee arthroplasty was performed on three patients—Sambhunath Mit (59), Meeta Devi Chowdhury (60) and Chhaya Chattopadhyay (72)—at Belle Vue on Wednesday.

“Computer-assisted total knee arthroplasty and minimally invasive surgeries have been performed in the city for a few years now,” said Dr. Santosh Kumar, head of knee replacement surgery at Belle Vue.

The three surgeries were performed on Wednesday under the supervision of the hospital’s orthopedic surgeon.

Dr. Santosh Kumar, head of knee replacement surgery at Belle Vue, said, “The knee surgery reduces recovery time and the patient can walk within a few hours of the surgery.”

Tech boost for surgery

**20th January, 2013**

**Kolkata:** A recent technological advancement, the ‘Ortho Pilot’, a navigation system, was introduced at Belle Vue on Wednesday.

The ‘Ortho Pilot’, a 3D navigation system for knee replacement surgery, is a more advanced version of the computer-assisted navigated knee replacement system. It uses a laser-guided computer to locate the knee’s exact position.

The system is used to plan the surgery and ensure the knee is placed exactly where the surgeon wants it. It also helps in determining the size of the implant needed.

Dr. Santosh Kumar, head of knee replacement surgery at Belle Vue, said, “The Ortho Pilot is a great advancement in knee replacement surgery. It helps in reducing the complications associated with the surgery and ensures a faster recovery time.”

POORVA ORTHOPAEDIC
About the Foundation

Poorva International Orthopaedic Foundation was created as a health charity dedicated solely to help people build, maintain and restore their bone and joint health. We do this by raising and allocating funds for the research, education, treatment and care that help patients to live and move independently - longer and stronger.

We invite you to help us in whatever capacity you can to fight against orthopaedic diseases & disorders. Your participation helps the tens of thousands of people living with pain, isolation, unhappiness and an inability to enjoy life due to bone and joint disorders such as arthritis, osteoporosis and injury.

Founded in 2014, Poorva Orthopaedic Foundation is a national registered charity powered by professional staff and network of volunteers. The Foundation is Kolkata’s only health charity dedicated solely to helping people maintain and restore their bone and joint, or orthopaedic health.

What we do
Poorva Orthopaedic Foundation raises money through the trustees’ donations and invests those funds in programs to advance orthopaedic research, promote patient and public education, and improve community care.

The Foundation is committed to patient education and to providing patients and their families with accurate, up-to-date information that will make going through orthopaedic surgery a little easier and less frightening.

Our Vision:
To be Patients’ voice for bone and joint health.

Our Mission:
To achieve excellence in bone and joint health, mobility and function for all patients through the advancement of research, education, and care.

Our Values:

People: We work in the interest of orthopaedic patients, their families, and the professionals who treat them and for the future of any individual who may require orthopaedic care.

Making a Healthy Difference: We contribute to the health of our communities and our nation by working with volunteers, patients, professionals, government and industry toward timely and quality access to bone and joint care.

Good Governance: We are committed to excellence in the governance of our organization and will do so ethically, morally, according to the law, and towards the achievement of our Mission.

Help to keep people on the move!
